

DC inverter voltage difference is high

Overview

This is caused by low intermediate circuit DC voltage. This can be caused by a missing supply voltage phase from a blown fuse or faulty isolator or contactor or internal rectifier bridge fault or simply low mains voltage. POSSIBLE FIXES: Check mains supply and fuses.

DC inverter voltage difference is high

On sunny days, Inverter switches off when DC voltage gets too high

At other times of the day, when the battery reaches 100%, the DC voltage is not as high and the inverter does not switch off. Amps do not rise above 10.3A on each string, at any time.

6. Troubleshooting and Support

High DC ripple is usually caused by loose DC cable connections and/or too thin DC wiring. After the inverter has switched off due to high DC ripple voltage, it waits 30 seconds and then restarts.
