

Electricity consumption of communication base station in one year

Overview

In 2021, the annual electricity consumption from communication base stations was 83,525.18 GWh by 2030 (average across three scenarios), with an increase of 448.

Electricity consumption of communication base station in one year

Explainer: What is Electricity?

Electricity is the flow of electrons, which is a basic and widely used form of energy. Most electricity is generated by converting primary energy sources like coal, natural gas, and nuclear power.

Measurements and Modelling of Base Station Power

The real data in terms of the power consumption and traffic load have been obtained from continuous measurements performed on a fully
