

Flywheel energy storage device droop control

Overview

The flywheel energy storage system (FESS) is usually used for renewable energy system such as wind turbine generator system (WTGS) to adjust the quality of output power. Droop control is a kind of control technology to regulate the active power and reactive power in micro-grid.

A Novel Control Method Based on Droop for Cooperation of Flywheel

The flywheel ESS, which has high power density, is used during MG transient responses, and the battery ESS responds to long-term load changes. A new control method, based on droop equations,
