

# Solar energy for water heating and power generation

## Overview

---

The source of electricity in an active SWH system determines the extent to which a system contributes to atmospheric carbon during operation. Active solar thermal systems that use mains electricity to pump the fluid through the panels are called 'low carbon solar'. In most systems the pumping reduces the energy savings by about 8% and the carbon savings of the solar by about 20%. However, low power pumps operate with 1-20W. Assuming a solar collector panel delivering 4 kWh/day and a pump running.
