

Static Energy Storage Uninterruptible Power Supply

241KWH

RackArk-HV Series

768V 314AH

Overview

In static UPS, storage of energy is made in electrochemical batteries (secondary sources) and also the required conversions of electrical power are performed by semi-conduction electro converters, which do not consist of moving parts and are classified as static ones.

Compare Static Ups and Rotary Dynamic Ups Static Ups Also Have Drawbacks What Are The Defining Features of A Static Ups? What Are The Main Characteristics of Dynamic Ups? Static Ups Or Dynamic Ups? What Power and Performance Does Each Ups offer? They are called static UPS because their operation does not require moving mechanical elements (except fans). They use power electronics to convert alternating voltage into direct voltage by means of semiconductors and have stored the necessary energy to deliver, in the event of a power failure, in accumulator batteries. Static UPSs have a wide range. See more on instrumentation tools IQS Directory
