[What does the exclamation mark do before the function?](#)

(function(){})(!); Lastly, ! makes the expression return a boolean based on the return value of the function. Usually, an immediately invoked function expression (IIFE) doesn't explicitly return

[What is a Photovoltaic Bracket and How Does it Work?](#)

Photovoltaic brackets play a crucial role in the solar energy sector. These brackets securely hold solar panels, ensuring their stability and optimal positioning.

What is the purpose of a self executing function in javascript?

Actually, the above function will be treated as function expression without a name. The main purpose of wrapping a function with close and open parenthesis is to avoid polluting the global space.

javascript

A function of that nature can be called at any time, anywhere. jQuery (a library built on Javascript) has built in functions that generally required the DOM to be fully rendered before being called.

Super Solar

An angle adjustable bracket is a mounting component that allows solar panels to be installed at adjustable tilt angles. It is commonly used on flat roofs or low-slope rooftops to optimize solar energy

Error: could not find function in R

Error: could not find function "plot.prcomp"
Firstly, you shouldn't be calling S3 methods directly, but lets assume plot.prcomp was actually some useful internal function in package foo. To call such function

Photovoltaic fixed and adjustable bracket

In short, the photovoltaic fixed and adjustable bracket is an

Necessary accessories for PV installation: brackets

At present, there are 3 types of brackets used in most PV power plants: fixed conventional bracket, adjustable tracking bracket and flexible PV

syntax

I have seen the use of %>% (percent greater than percent) function in some packages like dplyr and rvest. What does it mean? Is it a way to write closure blocks in R?

How do function pointers in C work?

359 Function pointers in C can be used to perform object-oriented programming in C. For example, the following lines is written in C:

What's the difference between **__PRETTY_FUNCTION__**.

About `__func__`: "The identifier `__func__` is implicitly declared by the translator as if, immediately following the opening brace of each function definition, the declaration: `static const char`
